An Overview On

Forcep Jaw Types

You will see that forceps in our catalogue will have either a traditional serrated jaw or a different design which is known as atraumatic (or non-traumatic).

Traditional Serrated Jaw

The traditional serrated jaw is generally more robust and used on forceps where the areas are not as delicate.

Atraumatic Jaw

Atraumatic jaws will be mainly found in delicate surgery areas such as vascular and cardiothoracic. The design is such, that the surface area gripped is reduced, ensuring less trauma without the loss of grip.

Choosing the most suitable needle size

Our tungsten carbide inserts are available in a variety of styles. Choosing the most suitable needle size for each procedure helps give the surgeon maximum grip and control.

Coarse 0.65mm

For powerful needle holder patterns and wire twisters. Maximum holding capabilities for heavy needles or wire.

Standard 0.5mm

Used, for example, in Mayo-Hegar, Mathieu Needle Holders. For needles 3-0 and larger.

Fine 0.4mm

For delicate needle holders such as Crile-Wood and DeBakey. For needles and sutures between 4-0 and 6-0.

Micro 0.2-0.3mm

For micro needle holders such as Castroviejo, Microvascular and Mini-Ryder. For delicate needles and sutures between 7-0 and 10-0.

Smooth

Smooth tungsten carbide surface reduces damage to delicate needles and suture of 6-0 and finer.

Tungsten Carbide Needle Holders

Features and Benefits

Jaw

Tungsten carbide inserts bonded into the jaws for a long lasting, secure grip

Bevelled Edges

Prevents suture from snagging

Laser Etching

Date and catalogue number are etched for easy re-ordering. Laser etch will not harm instrument like traditional methods

Satin Finish

Reduces glare

Ratchets

Precisely cut for effortless locking/unlocking

Teeth

Fine, hard teeth, diamond cut into an insert of hardened tungsten carbide for superior needle grasping and suture tying capabilities

Vacuum Brazing

Combines bonding of the tungsten carbide insert with the simultaneous vacuum hardening of the instrument for greater durability and longevity

Shanks

Precision balanced for comfort and control

Gold Handles

For easy identification

Endoscope Re-fibre

Surgical Holdings manufacture their own fibre bundles in house. We cover small and larger diameter scopes and only use high quality German fibre optic material and stainless steel tubing.

Quality components, globally sourced:

- ✓ Medical grade stainless steel tubing
- ✓ German engineered new glass fibre
- ✓ New fibre cone as standard
- ✓ New solderable sapphire distal window
- ✓ New light post colour ring
- ✓ New objective in 95% of cases
- ✓ Replacement 'O' ring to prevent leakage

The difference between Monopolar Electrosurgery and Bipolar Electrosurgery

There is one basic difference between bipolar and monopolar techniques. With monopolar electrosurgery, a probe electrode is used to apply the electrosurgical energy to the target tissue to achieve the desired surgical effect. The current then passes through the patient to a return pad and then back to the ESU generator to complete the circuit.

With the bipolar electrosurgical method a bipolar device, often a set of forceps, is used. The electrical current passes from one side of the forcep, through the target tissue to the other side of the forcep, then back to the generator. The electrical current is restricted to the tissue between the forcep, therefore not requiring the use of a grounding pad.

Passivation Process

Did you know...

Stainless steel is self passivating which provides natural corrosion resistance.

Passivation is the natural process that occurs to a surgical instrument containing chromium. The chromium in the stainless steel naturally reacts with oxygen in the air, creating the very thin passive layer which protects the surface of the steel.

An Overview On

Atraumatic Jaws

Also known as non-traumatic, atraumatic jaws will be mainly found in delicate surgery areas such as vascular and cardiothoracic. The design is such, that the surface area gripped is reduced, ensuring less trauma without the loss of grip.

Atraumatic jaws are available as straight or curved.

Special Care Needed For Your Thoracic Instruments

Staining

Beware of the use of Saline during surgery. This can be very damaging to any instrument if not immediately rinsed after surgery. Saline is highly corrosive. The image shows damage to the passive surface of an instrument.

Rusting

Due to the nature of their use, Thoracic Retractors can tarnish or present rust easily. These retractors can be fully refurbished and passivated by Surgical Holdings.

SURGICAL GOWNS

OUR SURGICAL GOWNS

Our ARMA gowns offer superb quality, performance and variety, to keep you and your patient safe and we always strive to achieve the following in our Surgical Gown range:

CHOICE

We know that all clinicians and procedures are different, that's why we offer an extensive choice of fabric options and reinforcements to meet the demands of our customers.

PROTECTION

Our surgical gowns offer unbeatable protection. Each gown meets or exceeds the minimum performance requirements of the EN13795 standard*, whilst of course being latex free. What's more, our SMS gowns have an alcohol repellent treatment to enhance protection.

PERFORMANCE

Comfort and ease of use are vitally important, and we strive to achieve both in all our gowns. Our soft cuffs and long velcro fastenings allow for enhanced fit and comfort, even in the longer procedures, whilst our use of high-tech fabrics keep you dry.

SPEED

Our gowns are housed in a dispenser box, making it quick and easy to store and use when the time comes. All our gowns feature colour coding and ARMA transfer tabs as standard. Our gown packs also include two different sized, absorbent, hand towels.

NON-REINFORCED GOWNS

EFFECTIVE AND AFFORDABLE

Sterile gowns are used during surgical procedures to protect both the patient and operating room personnel from the transfer of micro-organisms, body fluids and particulate material. This is a disposable garment.
